PROFILE

Leading WordPress & SaaS products that have global reach. My QA, DevOps, and automation background helps me spot trouble early and ship quality software.

Love building CI/CD pipelines, getting cross-functional teams to click, and creating processes that actually make sense. I'm the person who translates between developers and stakeholders, turning messy requirements into clear roadmaps while keeping everything on track. Beyond the technical side, I'm skilled in content writing, marketing, and both technical and human-centric support, because great products need great stories and genuine care for users.

Always learning, always solving problems, always finding better ways to deliver WordPress experiences that truly connect with people.

PROFESSIONAL EXPERIENCE

- Project Manager**
HappyMonster ⓘ

01/2024 – Present
Dhaka

 - Lead the planning, execution, and delivery of HappyAddons features and releases, ensuring alignment with strategic goals and user needs.
 - Manage cross-functional teams (development, QA, design, marketing) using Agile methodologies to drive efficient workflows and successful outcomes.
 - Oversee project timelines, resource allocation, and budget, consistently delivering projects on schedule and within scope.
 - Define and manage product roadmaps, translating business requirements into actionable plans and user stories.
 - Facilitate effective communication and collaboration among stakeholders, fostering a transparent and productive work environment.
- DevOps Engineer**
HappyMonster ⓘ

01/2022 – 12/2023
Dhaka

 - Designed, implemented, and maintained CI/CD pipelines, significantly improving software deployment frequency and reliability.
 - Automated infrastructure provisioning and management, leading to reduced manual effort and increased operational efficiency.
 - Collaborated closely with development and QA teams to troubleshoot issues, optimize workflows, and enhance system stability.
- Software Quality Assurance Engineer**
HappyMonster ⓘ

01/2021 – 12/2021
Dhaka

 - Developed and executed comprehensive test plans and test cases for WordPress products to ensure high quality and user satisfaction.
 - Performed functional, regression, and performance testing, contributing to the stability and reliability of product releases.
 - Actively participated in product design and development discussions to ensure testability and quality considerations were addressed early in the SDLC.
